

The Port of Pittsburgh Commission is seeking qualifications for engineering, permitting, right-of-way, and utilities services to develop cost estimates for funding, and a construction bid package to dredge the ingress and egress at specific locations along the Monongahela River. Ingress and egress for many river users along the shoreline between river mile 23.8 and 41.5 of the Monongahela has been impacted by the removal of the Elizabeth dam. Therefore, the PPC is interested to pursue developing a plan to adjust and/or restore access in specific locations for safe navigation from the shoreline to the official navigation channel. This project is to assess the scope of dredging required to maintain a depth of 11 feet below the waterline in specified areas of the Monongahela River for ingress and egress. Qualified offerors should request the full RFQ document by sending an email to: [matt@portpitt.com](mailto:matt@portpitt.com) or by writing to: Port of Pittsburgh Commission 4955 Steubenville Pike Suite 200, Pittsburgh, PA 15205.
