**Joseph A. Berkley Davis
Island Sludge Lagoons
Improvements Project**

West View Water Authority is required to submit a Sewage Facilities Planning Module to the Pennsylvania Department of Environmental Protection for a proposed project associated with the Joseph A. Berkley Water Treatment Plant (WTP). This project involves dewatering sludge produced from the WTP clarifiers in two existing lagoons located on Davis Island. A new pump station and gravity/force main piping will be constructed to transfer water collected from the solids settling process from the existing lagoons on Davis Island under the Ohio River backchannel and direct discharge into an interceptor sewer owned and operated by the Allegheny County Sanitary Authority (ALCOSAN). Final treatment will occur at the ALCOSAN wastewater treatment plant located on Pittsburgh's North Side. The flow generated from the project is estimated to be 100,000 gallons per day or 250 equivalent dwelling units (EDUs). As part of the PADEP requirements, projects that alter flow at existing sewage treatment facilities by more than 50,000 gallons per day or expend more than \$100,000 must provide a public notice. Beginning March 23, 2025, a copy of the Sewage Facilities Planning Module will be available for public comment and review for a 30-day period at the Stowe Township Municipal Building, located at 555 Broadway Avenue, McKees Rocks, PA 15136. Comments can be sent to West View Water Authority, 210 Perry Highway, Pittsburgh, PA 15229.
